Please CAREFULLY determine if this adapter cable will work with your specific equipment. We get a LOT of returns from customers claiming this product is defective, when in actual fact the video devices do NOT support a TRRS (4 conductor) connector, or do NOT support the composite video (Yellow RCA) video standard.

Specifications:

- Male 3.5mm 4 Conductor TRRS (Left & Right Audio, Video, and Ground) Connector.
- 3 RCA Female Connectors (Red/White RCA Audio, Yellow-Composite Video)
- Length: Approximately 6 inches
- Nickel Plated Conductors
- Pin-Out: Tip - White (Audio Left), Ring 1 - Red (Audio Right), Ring 2 - Signal Ground, Sleeve - Yellow (Video)

Important Tech Note: This cable is wired to the CTIA / Apple standard, in the image below it is the middle image. The most important factor in connecting this to your device is that the grounds match between this cable and your device. If your device has ground on the second ring this cable alone will work fine, you will just need to match up the other connectors to your device standard, meaning that the actual colors of the connectors might not match between your device and this cable (your yellow may connect to white on our cable), but the signal types will match and work properly. Also, if your device is wired as OMTP / Nokia, the third depiction, we have a product that will swap the second ring and sleeve connector and can be used along with this cable to properly align the ground connection, this product is the [FE-4CT-CTIA-MF](#).

RMA Returns for this product will be granted - but My Cable Mart will **NOT** provide pre-paid return shipping costs due to product incompatibilities
